SUMMARY

Senior Software Engineer with 7+ years of experience building backend platforms, distributed services, and cloud-native enterprise systems across fintech, SaaS, logistics, e-commerce, healthcare, and business automation. Strong background in modernizing legacy systems, designing reliable API ecosystems, optimizing databases, and improving production performance. Experienced with event-driven architecture, DevOps practices, security, observability, and cross-functional delivery. Recently focused on AI-assisted workflow automation, LLM integrations, RAG, and semantic search to improve operational efficiency. Known for taking ownership of complex backend systems, mentoring engineers, and delivering scalable, maintainable solutions in production environments.

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Offshore Team Apr 2023 – Jul 2024 | Remote

- Designed backend services for a multi-tenant CRM and operational workflow platform, replacing spreadsheet-heavy lead tracking with structured intake, assignment, status management, RBAC permissions, and reporting workflows.
- Built AI-assisted workflow automation services using LLM APIs, prompt orchestration, semantic retrieval, and backend document-processing pipelines, helping internal teams summarize operational records, generate reports, and reduce repetitive manual analysis.
- Modernized legacy admin, reporting, and automation modules into containerized .NET and Node.js services with PostgreSQL, Redis, Kafka, Docker, and Kubernetes, enabling safer service-level releases and reducing rollback risk.
- Reworked high-traffic CRM search, reporting, and workflow APIs by improving PostgreSQL query plans, caching frequently accessed data, and moving long-running tasks into background workers, improving average response time by roughly 40%.
- Implemented Kafka-based event flows for lead status changes, notification retries, report generation, and failed-message recovery using idempotent consumers, retry policies, dead-letter queues, and structured monitoring.
- Strengthened production security and supportability with OAuth2, JWT, RBAC, secure configuration handling, audit logs, distributed tracing, metrics dashboards, and incident-level debugging visibility.

Backend Engineer, Kobkiat-IT Oct 2020 – Apr 2023 | Remote

- Engineered backend services for fintech, eWallet, payment, e-commerce, and information-management platforms, supporting account workflows, transaction processing, payment callbacks, vendor integrations, and operational reporting.
- Developed wallet and payment-processing APIs using Java/Spring Boot, .NET Core, Node.js, PostgreSQL, SQL Server, Redis, and Kafka, improving transaction reliability under concurrent user activity and reducing failed payment retry issues.
- Built backend modules for used-cooking-oil supply-chain and GHG tracking workflows, including collection records, point-of-origin tracking, vehicle activity data, export-related financial records, and operational reporting for renewable-fuel processes.
- Improved e-commerce and logistics synchronization by developing real-time inventory, order-status, shipping, and payment-gateway integration flows, reducing stale operational data between storefront, warehouse, and finance systems.
- Optimized database schemas, indexes, stored procedures, API payloads, caching layers, and connection pooling for financial and operational workloads, improving reporting speed while reducing unnecessary infrastructure load.
- Supported secure and reliable delivery practices through API documentation, CI/CD pipelines, environment configuration, audit logging, exception handling, and monitoring patterns aligned with fintech-grade reliability expectations.

Software Developer, Emerio Jun 2019 – Sep 2020 | Manila, PH

- Developed enterprise backend modules for digital-transformation and application-maintenance programs, supporting workflow automation, internal operations, reporting, and integration needs for large business environments.
- Delivered Java/Spring Boot, C#, SQL Server, REST API, and scheduled-worker services that connected internal applications with third-party enterprise systems, improving data consistency across business and operations teams.
- Refactored legacy API logic, SQL queries, stored procedures, and batch-processing workflows to improve performance for reporting, synchronization, and business-process automation workloads.
- Supported production troubleshooting, deployment automation, and release stabilization for enterprise applications, reducing environment-related deployment issues and improving confidence during release cycles.

Backend Developer, Yeaps Nov 2018 – Jun 2019 | Manila, PH

- Delivered backend APIs and server-side modules for sales enablement, reporting, and customer-operation platforms aligned with YEAPS' focus on connected sales, marketing, modern work, and technology adoption.
- Produced Node.js, Express.js, MySQL, MongoDB, and REST API services for lead tracking, sales activity reporting, user management, and third-party integration workflows.
- Implemented authentication, session handling, input validation, and secure API communication layers for business-facing web applications, improving access control and workflow reliability.
- Created reusable backend utilities for reporting, customer records, integration handling, and internal platform modules, reducing duplicate development effort across sales and operations projects.

 PROJECTS

Jurlique — Real-Time E-Commerce Event Integration

Launched event-driven integration pipelines connecting e-commerce platforms, inventory systems, and operational services, improving real-time synchronization accuracy and reducing delayed fulfillment updates.

Paysociety — E-Wallet & Payment Processing System

Built retry-safe wallet transaction APIs with authentication, balance synchronization, payment callback handling, and audit-ready transaction records, improving payment workflow stability during concurrent user activity.

UCO Tracking System

Produced backend reporting and operational tracking services with optimized data-processing workflows, improving monitoring visibility and centralized reporting accuracy for internal operations.

RespAi — Fire Department CRM & Lead Generation Platform

Designed multi-tenant CRM backend services with RBAC security, workflow automation, and lead-processing modules, streamlining operational management for emergency-service organizations.

AI Workflow Automation Platform

Created an AI-assisted operations platform using LLM APIs, semantic search, document-processing pipelines, and backend orchestration to automate reporting, reduce repetitive manual analysis, and improve access to internal operational knowledge.

Recruitment Online Serviced by AXA

Architected enterprise backend modules and workflow APIs for a recruitment and onboarding platform, reducing manual candidate-processing tasks and improving hiring workflow efficiency.

 SKILLS

Backend Engineering: C#, .NET, ASP.NET Core, Entity Framework Core, Java, Spring Boot, Spring Security, Node.js, NestJS, TypeScript, Python, Django, FastAPI, Flask, Go, REST APIs, GraphQL, gRPC, WebSockets

Architecture & Distributed Systems: Microservices, Distributed Systems, Event-Driven Architecture, Clean Architecture, Domain-Driven Design, CQRS, SOLID, API Gateway, Service Discovery, Circuit Breaker Pattern, Rate Limiting, High Availability, Fault Tolerance

Cloud & DevOps: Azure, Azure App Services, Azure Functions, Azure API Management, Azure DevOps, Azure Service Bus, AWS EC2, ECS, Lambda, API Gateway, S3, RDS, SQS, CloudWatch, Docker, Kubernetes, Helm, Terraform, GitHub Actions, GitLab CI/CD, Jenkins, Linux, NGINX

Databases, Caching & Messaging: PostgreSQL, SQL Server, MySQL, MongoDB, Redis, Elasticsearch, DynamoDB, Database Design, Query Optimization, Indexing, Stored Procedures, Data Modeling, Apache Kafka, RabbitMQ, Azure Service Bus, SQS, Retry Policies, Dead-Letter Queues

AI & Automation: OpenAI API, Azure OpenAI, Claude API, LLM Integration, RAG Pipelines, Embeddings, Vector Search, Semantic Search, Prompt Engineering, LangChain, LlamaIndex, AI Workflow Automation, Document Intelligence, Summarization

Security & Identity: OAuth2, OpenID Connect, JWT, RBAC, SSO, Secure API Design, Identity Federation, HTTPS/TLS, Encryption, Secrets Management, Input Validation, OWASP Best Practices, Secure SDLC

Testing & Observability: Unit Testing, Integration Testing, API Testing, Load Testing, TDD, xUnit, NUnit, JUnit, Mockito, Jest, PyTest, TestContainers, Postman, Swagger/OpenAPI, OpenTelemetry, Prometheus, Grafana, ELK Stack, Application Insights, CloudWatch, Structured Logging, Distributed Tracing, RCA

Frontend & Integrations: React, Next.js, Angular, Vue.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, ERP Integration, CRM Integration, Payment Gateway Integration, Webhooks, Third-Party API Integration, E-Commerce Integration, Logistics Systems

Leadership & Delivery: System Design, Technical Architecture, Architecture Reviews, Technical Roadmaps, Code Review, Technical Mentorship, Agile/Scrum, SDLC, Cross-Functional Collaboration, Stakeholder Communication, Technical Documentation, Production Support, Release Management, Incident Management

 CERTIFICATES

Java: Data Structures

LinkedIn, Issued Jan 2026

M220N: MongoDB for .NET Developers

MongoDB, Issued May 2021

 EDUCATION

Bow Valley College , Diploma in Modern Software Engineering

Sep 2024 – Apr 2026 | Alberta, Canada

Thesis: AI-Assisted Enterprise Knowledge Retrieval Platform Using Retrieval-Augmented Generation (RAG) and Semantic Search

Cavite State University , B.S in Information Technology

Jun 2011 – Apr 2016 | Cavite, Philippines

Thesis: Web-Based Sales and Inventory Management System with Real-Time Reporting and Analytics
